

# Introducing CJC

The global financial services sector is transforming. Firms are looking to new operating models and harnessing new technologies to stay competitive. As market data remains the lifeblood of this sector, they also need to transition their data infrastructures to new, modern architectures that embrace greater automation.

Leveraging a global footprint, at CJC we offer world class consultancy, professional services and cloud-based tools to optimise and support the efficient distribution and commercial management of market data. Our portfolio of support, cloud and commercial management services offer clients the agility to help reduce enterprise cost and mitigate risk.

### World Class Expertise

SMEs in the distribution and commercial management of market data

### Unrivalled Experience

Decades of support for the world's largest hosted market data platform

### Innovative Toolsets

Premium tools to facilitate modern market data ITSM

### Global Presence

Local 24x7x365 presence in four global financial hubs

# Support Services

We offer a set of multi-technology, specialist managed services focused on the proactive monitoring, management, and troubleshooting of clients' market data distribution platforms. CJC's service components, common to all our managed services, are based on practices recommended by the Information Technology Infrastructure Library (ITIL). All can be delivered either remotely, on site, or via a flexible combination of the two, and against strict SLAs.

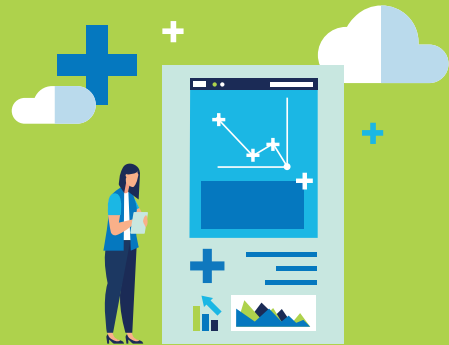

## Cloud Services

The CJC Cloud Platform, is our private cloud managed service. Using servers, available in Equinix in less than 24hrs, delivering market data as securely as on an internal network, this service effectively removes the need for clients to manage proprietary data centres. We have also created a suite of cloud based tools addressing big data visualisation and analytics, as well as assisting rapid deployment of applications to the cloud.

## Commercial Management Services

Our commercial management services enable clients to realise full value from their market data vendors and third party services, as well as improve cost control and compliance. We provide as little or as much support as required, from a one-off review project such as a mock audit, through to a fully managed service. These managed services can be for the complete workflow or any single component – such as invoice processing.

## Who we work with:
